DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 12 August 2004, with respect to independent claim 1 have been fully considered and are persuasive. The rejection of claims 1-18, 27, 28, 30, 31, 33, 34, 36 and 37 has been withdrawn.

Allowable Subject Matter

2. Claims 1-18, 27-28, 30-31, 33-34 and 36-37 are allowed.

3. The following is an examiner's statement of reasons for allowance: none of the references, either individually or in combination, teach or fairly suggest the combination of the limitations of the independent claim 1; no prior art has been found that suggested a modification of, or combination with, the cited prior art so as to arrive to the subject matter delineated by this claim; none of the prior art teach or suggest a manually activated input device, wherein the commanded individual linear displacements, or rotational excursions of the force/moment sensor, or both, are assigned specific kinematic motion patterns of parts of the real or virtual object therefore permitting manipulation or animation thereof as a transforming interlink and in that the commanded velocities of the corresponding individual linear displacements or rotational excursions of the force/moment sensor, or both of the above, are additionally weightable as a kinematic interlink assignment.

4. **Zhai et al., US 5, 923, 318**, reference of record, discloses 6-DOF input device using its linear and rotational displacement as interlink assignments for controlling position or velocity of a real or virtual object, but does not teach using velocity of the input device as an interlink assignment for the object.
